Suspected of damaging fertility or the unborn child. Adverse reproductive effects were seen in animal studies.  
Possible reproductive hazard. Suspected of damaging fertility or the unborn child. In rats, doses of 20 mg/kg cause decreased implantations and live fetuses. In mice, rats, and dogs, doses of 125, 20, and 30 mg/kg/day respectively, caused fetal malformations. In monkeys, doses of 10 mg/kg/day caused embryo-fetal deaths.  
Zonisamide is distributed into breast milk; in view of the potential for serious adverse effects in infants from zonisamide, licensed product information recommends that it should only be used in nursing mothers if the benefits outweigh the risks. It is also recommended that breast feeding must not be resumed until 1 month after stopping zonisamide therapy.
