Subject: Batch and Lot numbering

Dear Valued Customer,

When a bulk material is received in a Medisca facility and is released by our Quality Control department, a unique lot number is generated to the material by our internal system, for example 12345. Once the bulk material is scheduled for production, our internal system generates a letter in conjunction to the bulk batch number to identify the different runs. For example, the first run for bulk material released with lot# 12345, would be 12345/A, the second run would be 12345/B and so on, until the bulk material has been depleted. As the batch number 12345 is associated to one specific manufacturing batch and the letters following the batch number represent the different runs of the same batch, only one certificate of analysis is issued to identify the material, which in this example would be 12345.

Wishing you continued success in the world of pharmacy compounding.

Sincerely,

Quality and Compliance Support Team
